

Customer Information Bulletin

Subject: 3D Sprint v2.13 Announcement

Dear Valued Customer,

3D Sprint 2.13 is coming soon!

Once available you will receive a notification via an auto-update and our support page will be updated to include the download link.

The new release includes key new features and enhancements to 3D Systems plastic printers with a special focus on capabilities that enable to move from rapid prototyping to serial production. Key highlights include:

Figure 4

- Support the New Figure 4 Jewelry printer – ultra fast and affordable 3D printing solution for jewelry design.

NextDent 5100

- Enforcement Bars - increase part quality by strengthening the model and reducing deformation
- Stacked Arches - facilitate volume manufacturing (e.g. aligner production) with a one-click solution for optimized vertical stacking.

MJP

- HDF Mode - reduce post-processing time and cleaning material usage with a new build mode that creates a special support material pattern
- Auto-Lane Alternation – reduce wear and tear of the roller through optimized part positioning
- Verification strip margin - improve jetting reliability robustness

SLA

- Smart Supports structure - improved support structures increasing build success rate.

Note: Please refer to the [What's New document](#) for the complete list of new features and improvements in this release.
