Relocating MQG Chip

Removal of the chip is rather simple using a small flat tip screwdriver or something similar, just carefully wedge the screwdriver between the chip and the cartridge itself, and with a little prying it will pop off. Be sure to make note of the chip’s orientation before removing it, as you don’t want to put it back on upside-down.

Once it is removed, you can reattach it 2-3 millimeters lower than its previous location with either a small amount of superglue, double-sided tape, etc.

NOTE: Pay special attention to the orientation of the chip. Chip will not work if it is fastened upside down.

CAUTION: The material in the cartridge is light sensitive and can cure if exposed to sunlight or bright lights through the clear film on the bottom of the cartridge. Do not remove the foil top until you have repaired the cartridge and placed it in the system as per the user guide.
