Subject: Extended Shut-Down Procedure

Projet MJP 3XX0

In the event in which the Projet will be off for an extended amount of time, there are certain steps that are recommended to prevent issues from occurring upon starting the machine after the extended shut down. Please note that these instructions are not for turning off the machine then preparing for shipping/moving.

- If the machine will not be in use for 3 weeks or less, we recommend leaving the machine on, as the unit will go into an idol/conservate state.
- If you wish to turn the machine off for an extended amount of time, it is recommended to put an aluminum pan underneath the print head in the event material may leak during the shutdown procedure. After the pan or catch tray is directly under the print head, power down the machine through the UI. The shutdown option will be within the "Tools" tab. In the "Tools" tab select "Power Options" then select "Printer Shutdown".
- Upon starting the machine up from an extended shutdown, leave the pan underneath the print head until the unit is fully warm. After unit is fully warm, remove pan/catch tray and run a Dropmass.
